

SOLANA · COLOSSEUM 2026 · SUPERTeam BRASIL

**Crypto with
a real purpose,
in its owner's
hands.**

Buy with Pix. Pay with a tap. Keep the keys.

Brazil pays instantly. It still doesn't own its money.

01

Middlemen in every sale

Card machines take a cut of each payment and hold the merchant's money for days.

02

Crypto with no real use

Most tokens sit idle on exchanges. You can't buy a coffee with them.

03

Keys held by someone else

Buying crypto usually means leaving your keys, and your money, with an exchange.

**Make crypto simple,
useful for everything,
and truly owned by
the people who hold it.**

No bank. No middleman. Just you and your wallet.

From Pix to the counter in four steps.

One network. Four products. All live.

Built and shipped end to end: consumer, merchant, web and operations.

APP

SimPay Wallet

iOS and Android. Self-custody, QR and NFC tap to pay, cashback, referrals and push when money arrives.

PDV

Merchant point of sale

Charge in reais, show the QR, sell through NFC tags per till, cash out to Pix. Wallet restores with a PIN.

WEB

simpay.tech + Blinks

Buy SIMPAY with Pix to any wallet. Every till link is a Solana Blink payable from Phantom.

OPS

Admin console

Partner approval, cashback review, Pix webhooks, treasury costs on Solana, push campaigns, full audit log.

Crypto that behaves like a payment app.

01 Tap to pay on Solana

NFC tags at each till open the live charge. No card machine, no app required on the merchant side.

02 Every till is a Blink

The same link becomes a Solana Action: pay from Phantom or anywhere Blinks render.

03 Recover with a PIN

Merchant wallets restore on a new device with only the PIN (Argon2id + server share). Keys never leave the device.

04 Rewards with a human in the loop

Cashback and referrals are scheduled, reviewable by an admin, then paid automatically on-chain.

~1s

to confirm a payment
at the counter

<\$0.001

network fee per transaction,
so micro-payments make sense

Built on Solana devnet.

SPL Token

Solana Pay references

Solana Actions / Blinks

Metaplex metadata

Pix via Delfinance (mTLS)

HashiCorp Vault

OneSignal push

Non-custodial keys

Built for the counter, not the trading desk.

PRIMARY

Small merchants

Cafés, restaurants and local services in Brazil that lose margin to card fees and wait days for their money.

GROWTH

Pix-native consumers

People 18–35 who already pay everything by phone and are curious about crypto but want it simple.

EARLY

Crypto holders

Solana users who want to actually spend: pay a Blink from Phantom, earn cashback on real purchases.

Cheaper for the merchant. Sustainable for the network.

WEBSITE SIMULATOR • 5s

Cashback and referrals: funded by the 20% rewards allocation.

0%

to receive a payment

Merchants keep the full sale. No machine rental, no waiting days.

5%

only when cashing out to Pix

Merchants choose when to convert. Many keep SIMPAY to spend in the network.

+

service fee on Pix purchases

Consumers buy SIMPAY with Pix; a small fee funds operations.

A growth loop built into the product.

1

2

3

4

Pilot merchants

Hand-onboard cafés and local shops with NFC tags and a 5-minute setup.

Merchant → merchant

Each merchant gets a code. Both earn SIMPAY after the new shop's first sales.

Customer → customer

Cashback on every purchase plus invite codes. Rewards unlock on the first real payment.

Blinks everywhere

Till links shared on X, WhatsApp and Phantom bring crypto users to the counter.

NEXT: PILOT MERCHANTS → FIRST PAYMENTS → NETWORK GROWTH

The same rails, for every payment that hurts.

EXPANSION VISION

NOW

Counter payments

Consumers pay local merchants by QR, NFC and Blinks.

NEXT

Business-to-business

Companies pay suppliers and each other: large amounts, settled in seconds, any day, any hour.

THEN

Cross-border remittances

Money sent from abroad lands in a Brazilian wallet and cashes out to Pix, without correspondent banks.

Less friction, fewer fees, fewer intermediaries.

EXPANSION VISION

B2B

Payments between companies

TODAY Bank transfers with cut-off times, weekend delays and fees on every large payment.

WITH SIMPAY Pay suppliers in seconds, 24/7, with an on-chain receipt ready for reconciliation.

LOOP Merchants already paid in SIMPAY pay their own suppliers without cashing out.

REMIT

International remittances

TODAY Several banks in the middle, high fees and days until the money arrives.

WITH SIMPAY Sent on Solana in seconds; the family cashes out to Pix or spends at partners.

COMPLIANCE Operated with licensed exchange partners, following Brazil's crypto-asset rules.

Not a mockup. A working network on devnet.

- Wallet app for iOS and Android
- Buy with Pix, delivered on-chain
- Cashback and referral programs
- Push notifications when money arrives
- Merchant PDV with QR and NFC tags
- Solana Blinks for every till
- Admin console with full audit log
- Token metadata, whitepaper v2.0

PIX → YOUR WALLET

Buy SimPay tokens

Pix USDC or SOL

⚡ Step 1 · How much do you want to buy

AMOUNT IN REAIS FOR THE TOKENS

R\$ 20

📁 Step 2 · Where to receive

YOUR SOLANA WALLET ADDRESS

Paste the address (e.g. from SimPay, Phantom or Solflare)

🔒 Tokens go straight to this address. Double-check it: blockchain transfers can't be undone.

WEB CHECKOUT · ENTRY FLOW

FIXED SUPPLY • SPL TOKEN • SYMBOL SPY

5,000,000,000

Minted once. Mint authority is revoked at mainnet launch, so no new tokens can ever be created.

Devnet today. Mainnet next.

Built like financial infrastructure.

Security first

Secrets in HashiCorp Vault, bank API over mTLS, keys never leave the user's device.

Every action audited

Admin changes, reward adjustments and blocks are logged with before and after.

Tested end to end

300+ automated tests across API, merchant app and wallet.

BUILT FOR EVERYDAY USE

Your keys. Your money.

Pix entry. QR and NFC payments.

One connected experience.

**Pay like Pix.
Own like
crypto.**
